Nonprofits Need Population Data

Key Takeaways

- 1. Complete Census data help nonprofits determine the needs of their area and secure support for vulnerable populations through additional federal funding.
- 2. The populations that nonprofits often serve are the same populations that are frequently considered hard-to-count, meaning an undercount could be especially damaging to the data points used by nonprofits.
- 3. Census data are needed for operational decisions, such as deciding where to provide services and how to expand impact.
